

Trackla - Getting Started Guide

Version: May 2026

A practical guide to set up your company, onboard users, and run renewals reliably.

Table of Contents

1. Trackla at a Glance
2. Accounts, Company, and Access
3. Subscriptions (Fields + Best Practices)
4. Reminders and Notifications
5. Auto Renewal (How it works + How to test)
6. Import/Export
7. Setup & Configuration
8. Company Details
9. Notifications
10. Reports
11. Compliance / Renewals
12. History Log (Audit Trail)
13. Troubleshooting

Quick Start Checklist

- Confirm Company Name and LCY (local currency).
- Add users and assign roles (Viewer / Contributor / Admin).
- Set up Payment Methods and any Custom Fields you need.
- Add your first subscription and set Next Renewal (YYYY-MM-DD).

Trackla - Getting Started Guide

1) Trackla at a Glance

Trackla helps you track subscriptions, control spend, and never miss renewals.

Core pages

- Dashboard: spend overview, trends, and quick access to what needs attention.
- Subscriptions: create/edit subscriptions, manage renewal dates, reminder policies, and auto-renewal.
- Notifications: in-app reminders generated from subscription dates and compliance schedules.
- Reports: analytics and audit reporting across subscriptions and spend.
- Setup & Configuration: currencies, payment methods, custom fields, and related setup.
- Company Details: company profile, departments, employees, and user management.
- Compliance / Renewals: track policy/filing/licence dates and set reminder schedules.

Important data concept

- Next Renewal: the key date used for reminders and auto-renewal.

2) Accounts, Company, and Access

Company and currency

- Company Name: displayed across the app and in the sidebar company selector.
- LCY (Local Currency): used for normalized reporting and LCY Amount calculations.

Switch Company

- If your user has access to multiple companies, use the company selector in the sidebar to switch.
- Switching changes the active tenant context (data shown across the app).

User Management (roles)

- Super Admin / Global Admin: full access (may switch across tenants if enabled).
- Contributor: can create and update subscriptions and related data based on permissions.
- Viewer: read-only access to pages and reports.

Best practice

- Keep Owner and Owner Email accurate for accountability and audits.

3) Subscriptions (Fields + Best Practices)

Use these fields to keep renewal operations and reporting clean:

Identity

- Subscription Name (Service Name): the primary label used throughout the app.
- Vendor: the supplier/provider of the subscription.
- Website: vendor link for quick access to billing/admin portals.
- Category: used for grouping and reporting.
- Department(s): used for cost allocation and reporting.
- Owner / Owner Email: internal responsibility (use real owners for audit clarity).

Financials

- Currency: billing currency for the subscription.
- Amount: unit price for a single license/unit.
- Qty: number of units (licenses/seats).
- Total Amount: Amount × Qty (may be stored/derived depending on workflow).
- LCY Amount: normalized amount in LCY for consolidated reporting.
- Payment Method: how this subscription is paid (card/bank/etc).

Trackla - Getting Started Guide

Renewal schedule

- Billing Cycle: Monthly / Quarterly / Yearly / Weekly (affects auto-renew calculations).
- Start Date: current cycle start date.
- Next Renewal: current cycle end date (the date Trackla uses for reminders and

auto-renewal).

Status and control

- Status: Active/Inactive (ensure Active for reminders and renewal operations).
- Auto Renewal: enable only if you want Trackla to renew automatically on the Next Renewal date.
- Notes: store key contract information, renewal terms, or approval context.

4) Reminders and Notifications

Trackla supports configurable reminder policies:

Reminder Days

- Number of days before Next Renewal that reminders should begin.

Reminder Policy

- One time: creates a single reminder at (Next Renewal - Reminder Days).
- Two times: creates two reminders at (Next Renewal - Reminder Days) and at about half that distance.
- Until Renewal: creates daily reminders from (Next Renewal - Reminder Days) through Next Renewal.

Notifications page

- Shows upcoming reminders and alerts created by subscriptions and compliance schedules.
- Use it as an operational inbox for renewals and follow-ups.

5) Auto Renewal (How it works + How to test)

How it works

- Auto Renewal triggers when Auto Renewal is enabled AND Next Renewal equals today (UTC date).
- When triggered, Trackla renews the subscription by setting Start Date to today and advancing Next Renewal based on Billing Cycle.
- A history entry is created with Changed By = System (Auto-Renewal).

How to test (recommended)

- 1) Pick a subscription and set Auto Renewal = ON.
- 2) Set Next Renewal to today in YYYY-MM-DD format (example: 2026-05-20).

3) Ensure Status is Active.

- 4) Restart the backend once OR wait for the midnight (IST) scheduled job.
- 5) Verify Start Date updated to today and Next Renewal moved forward correctly.
- 6) Check Subscription History for an "Auto Renewed" entry and date range change.

Note

- If Next Renewal is not a valid date, auto renewal will not trigger.

6) Import/Export

Import/Export helps you onboard quickly and keep data consistent.

Import tips

- Use a consistent date format (YYYY-MM-DD) for Start Date and Next Renewal.

Trackla - Getting Started Guide

- Ensure required identity fields (Subscription Name, Vendor) are present.
- Validate currency codes (USD, EUR, SGD, etc.) and Qty values.
- If you import departments, use consistent naming to avoid duplicates in reports.

Export tips

- Export is useful for audits, reconciliations, and bulk edits.
- After re-importing, review Subscription History to confirm changes were applied as expected.

7) Setup & Configuration

Setup & Configuration is where you define the building blocks used across subscriptions and reports.

Currency

- Maintain the list of currencies used for subscription billing.
- LCY is your primary reporting currency.

Payment Methods

- Add and manage payment methods (cards/bank accounts) used by subscriptions.
- Keep expiry dates accurate if you track payment expiry alerts.

Custom Fields

- Use custom fields to capture organization-specific data (Cost Center, Contract ID, etc.).
- Keep naming consistent so imports and reports remain clean.

8) Company Details

Company Details centralizes company-level data used throughout Trackla.

Company Information

- Company Name and key profile details for the tenant.

Department

- Define departments for spend allocation and access workflows.

Employees

- Maintain employees for ownership assignments and reporting.

User Management

- Add users, set roles, and confirm who has access to the tenant.

9) Notifications

Notifications are generated from subscription reminder rules and compliance schedules.

What you will see

- Upcoming renewals and reminder types (One time / Two times / Daily).
- Compliance-related reminders if you use Compliance / Renewals.

Best practice

- Treat Notifications as a daily inbox for renewals and follow-ups.

10) Reports

Reports provide visibility into spend and change history:

Common report outcomes

- Spend analysis by vendor, category, department, or period.
- Trend views to spot growth in recurring spend.
- Audit-history style reports to review who changed what and when.

Trackla - Getting Started Guide

Best practice

- Keep departments and categories consistent for clean reporting.

11) Compliance / Renewals

Compliance and Renewals help you track deadlines beyond subscriptions (policies, filings, licences).

What to set

- Submission/renewal deadlines (date-only fields).
- Reminder policy and reminder days similar to subscriptions.

Outcome

- Notifications are generated so teams never miss important compliance deadlines.

12) History Log (Audit Trail)

Subscription History records key changes over time.

You will see

- Who changed it (Changed By).
- What changed (field-by-field changes).
- When it changed (Updated On).

Auto Renewal entries

- Display as Auto Renewed and show the date range change.
- If you only see date lines, confirm the record is detected as a renewal and that auto-renewal is enabled.

13) Troubleshooting

If reminders or auto-renewal do not work as expected:

Checklist

- Confirm the subscription is Active.
- Confirm Next Renewal is a valid date in YYYY-MM-DD format.
- Confirm Reminder Policy and Reminder Days are set.
- Confirm Auto Renewal is enabled (for auto-renew behavior).
- Check Subscription History for changes and whether a renewal was logged.

Support

- Use Contact Support (WhatsApp) from the Help section in the landing page.
